

Instructions to Authors 2012

1. General

CHIMIA, a scientific journal for chemistry in the broadest sense, covers the interests of a wide and diverse readership. Contributions from all fields of chemistry and related areas are considered for publication in the form of *Review Articles* and *Notes* under the headings of Editorial, Research, Technology/Applied Chemistry, Columna, Information, and CHIMIA Report/Company News. A characteristic feature of CHIMIA are the special topic issues, in which the contents of one issue are devoted to an area of chemistry of great current significance. Membership of the *Swiss Chemical Society (SCS)*, the publisher of CHIMIA, or in one of the organizations named in the masthead (impressum), is not a prerequisite for the acceptance of a manuscript. The decision to accept a contribution rests with the Editorial Committee of CHIMIA. Copyright laws apply, and no payment will be made for contributions.

2. Forwarding Address

Manuscripts should be submitted, together with a covering letter signed by the author to whom correspondence should be addressed, to:

Prof. Jérôme Lacour
Département de Chimie Organique
Université de Genève
Quai Ernest Ansermet 30
CH-1211 Genève 4
Tel.: +41 22 379 60 62
Fax: +41 22 379 32 15
E-Mail: jerome.lacour@unige.ch

For information on submitting a manuscript please refer to Section 7 of these instructions. Correspondence concerning submitted manuscripts should be sent to the same address quoting the manuscript reference number.

3. Types of Manuscripts

The authors should consider the fact that the heterogeneous readership of CHIMIA, although trained in fundamentals, may not have extensive knowledge in specialized topics.

Review Articles. Preference will be given to creative reviews that are timely, critical, and comprehensive. Historical reviews and reviews with an educational background are also welcome. For clarity, divisions and subdivisions should be used,

i.e. 1. ..., 1.1 ..., 1.1.1 ... with appropriate titles, *e.g.* **Introduction, Results, Discussion, Experimental.**

Notes. Brief communications or limited studies in any area of special interest.

4. Preparation of Manuscripts

General Considerations. Bearing in mind the international readership of CHIMIA, authors are strongly encouraged to submit manuscripts in English; however, manuscripts in German or French can also be accepted for publication. The manuscript should be prepared with a suitable word processing program (please refer to Section 7 for details) with A4 or similar format.

Pages should be numbered consecutively beginning with the title page. References, tables, figure legends, formula collections, schemes, and figures must be grouped together in this order at the end of the manuscript and numbered accordingly.

Title Page. Attention is drawn to the following points:

a) The title of a manuscript should reflect concisely the purpose and findings of the work in order to provide maximal information for a computerized title search. Abbreviations, symbols, chemical formulae, references, and footnotes should be avoided. First letters of nouns and adjectives are capitalized.

b) The authors' full first names, middle initials, and last names should be given, followed by the address (or addresses) of the contributing institution(s). The author to whom correspondence and/or inquiries should be directed should be indicated by an asterisk*.

The complete address, including phone number and e-mail address, of the correspondence author should also be given.

Abstract. The second page of the manuscript should be reserved for a summary in English, independent of the language of the main text. If this is German or French, the abstract should be preceded by an English translation of the title. The summary should be self-explanatory and intelligible without reference to the text.

Keywords. A maximum of five keywords should be given in alphabetical order, in English, after the abstract. The keywords will be used for the annual subject index. Well-chosen keywords will help a reader to find articles of potential interest. Please provide keywords that are informative without being too general, *e.g.* advanced materials, antibiotics, catalysis, computa-

tional chemistry, electrochemistry, highly reactive substances.

References and Footnotes should be numbered sequentially, in square brackets, in the order they are cited in the text. References and footnotes are to be collected in numerical order at the end of the main text. Titles of journals must be abbreviated according to Chemical Abstracts (*cf.* Chemical Abstracts Service Source Index (CASSI)).

Attention is drawn to the following conventions:

- Names of all authors of cited publications should be given. Use of '*et al.*' in the list of references is not acceptable.
- Whenever possible, composite references should be used, instead of a series of individual ones. The abbreviation '*ibid.*' may not be used.
- In references described as 'personal communications', an affiliation should follow the name(s) of the person(s).

Examples:

Journals: a) A. Eschenmoser, *Chimia* **2005**, *59*, 836; b) M. Hollenstein, C. J. Leumann, J. *Org. Chem.* **2005**, *70*, 3205. c) K. Gademann, *Chimia* **2006**, *60*, 841; doi:10.2533/chimia.2006.841

Books without editor: D. J. Adams, P. J. Dyson, S. J. Tavener, 'Chemistry in Alternative Reaction Media', Wiley, Chichester, **2004**.

Books with editor: P. E. Nielsen, in 'Pseudopeptides in Drug Discovery', Ed. P. E. Nielsen, Wiley-VCH, Weinheim, **2004**, p. 753.

Miscellaneous: a) A. Viger, Ph.D. Thesis ETH Zürich No. 16060, **2005**; b) E. Kuebler, B. Oesch, P. Price, WO Patent Appl. No. WO2003029813, **2003**; c) MOLEKEL 4.0, P. Flükiger, H. P. Lüthi, S. Portmann, J. Weber, Swiss Center for Scientific Computing, Manno (Switzerland), **2000**.

In the text, reference to author(s) of cited works should be made without giving initials, *e.g.* '... as shown by Jones and Smith.^[7]' If the reference carries the names of three or more authors, it should be quoted as '... Smith *et al.*^[3]', if Smith is the first author, or as 'Jones and coworkers,^[3]' if Jones is the senior author.

Tables Tables should be used only if they present information more effectively than running text. Numbered tables with suitable captions at the top should be placed after the references. Each table must be referred to in the text. Column headings should be as short as possible but must define units unambiguously. When necessary, an abbreviated or symbolic column heading should be used and explained in

the table-heading or in a footnote. Footnotes to tables should be labeled a, b, c, etc. and placed at the bottom of the table.

Structural Formulae, Schemes, and

Figures. All graphics must be submitted as separate graphics files. Computer platform independent graphic file formats such as encapsulated postscript (eps) or portable document format (pdf) are preferred. Graphics embedded in Wordfiles are **not** suitable for processing. Color graphics are welcome but there will be a charge to cover the extra cost. Please contact the Editor for an estimate.

Original graphics are preferred. If graphics are taken from a previous publication, permission to reproduce the figures must be obtained from the publisher before submission to CHIMIA and confirmation should be included with the manuscript. In any case, drawings must contain all necessary symbols and lettering, *i.e.* they must be usable without additional artwork by the CHIMIA printers.

The authors may make a recommendation for the ultimate size of the figures, which will taken into consideration if possible. Suitable line thickness (*e.g.* a minimum of 0.5 mm for an A4-sized drawing which will reduce to approx. 0.13 mm in the final version), line spacings, and letter size (Helvetica and Symbol fonts) should be chosen for optimal reproduction when reduced to the printed size. Graphics files should be named to agree with the text and figure legends.

Structural formulae will not be typeset and must, therefore, be provided by the authors in electronic form ready for reproduction. They should, preferably, be combined in suitable schemes. In general, only displayed formulae should be numbered (boldface); compounds mentioned only in the text should be referred to by name.

For authors using the ChemDraw program, the following document settings are recommended; authors using other drawing packages should adapt these parameters to their systems and **then convert the data to a high-resolution pdf format:** fixed length, 14.4 pt (0.508 cm); line width, 0.6 pt (0.021 cm); bold width, 2.0 pt (0.071 cm); chain angle, 120 degrees; bond spacing, 18% of width; margin width, 1.6 pt (0.056 cm); hash spacing, 2.5 pt (0.088 cm). Single-width bold and dashed lines are preferred to wedges for stereochemical notation: 12-pt Helvetica font should be used for text material, and 10-pt Helvetica font for atom labels. Drawings should be prepared with the page setup at 100% for paper size and scale.

The drawings will be reduced before publication. The size of the reduced drawings should not exceed 5.8 cm (one-column format), 12.3 cm (two-column format) and 18.8 cm (three-column format).

Chemical Equations and Physical or Mathematical Expressions.

Chemical equations and physical or mathematical expressions should be numbered sequentially on the right-hand side with Arabic numerals in parentheses. Physical quantities and variables that have to be defined in the text should be written in italics (wavy line). It is recommended to use the symbols proposed by IUPAC (*cf. Pure Appl. Chem.* **1979**, *51*, 1 and www.iupac.org/reports/1993/homann/index.html). Fractional expressions should be written using a slant, *e.g.* $h\nu/kT$. These expressions should be provided in a separate pdf file.

5. Nomenclature

All new compounds should be named in accordance with IUPAC nomenclature rules. As an additional guideline, the Index Guide of Chemical Abstracts can be consulted. Some special conventions peculiar to CHIMIA are:

For common solvents, reagents, or other compounds, the molecular formulae or accepted abbreviations may be used: *e.g.* CHCl_3 , NaCl, SOCl_2 , CH_3OH (or MeOH), DMF, DMSO, THF, Py. Please consult a recent issue of CHIMIA for other commonly used abbreviations and symbols.

Different substituents should be designated by superscripts: R^1 , R^2 , R^3 , etc. (Subscripts denote the number of substituents.) Individual atoms should be referred to as C(2), N(5) (not C-2 and N-5) etc. For 'the hydrogen atom attached to the carbon atom 4' etc., CHIMIA prefers the notation H-C(4).

An *ad hoc* abbreviation may be used for a name or formula that occurs repeatedly. This must be clearly defined the first time it appears, *e.g.* THC = tetrahydrocannabinol.

6. Units and Their Symbols

SI units are to be used, especially in contributions dealing with physical chemistry. However, some non-SI units are acceptable, *e.g.* Å, l, ml, µl, mg, µg, Hz, MHz, min, h, d, °C, mbar, eV.

7. Submission of the Manuscript

The following guidelines should be followed:

- Each formula, figure or scheme should be saved in its native format in a separate file.
- Tables should be included after the text. The tables should be set up with the table function of the word processing software or with the tabulator key.

c) Please use Times font for text and Symbol for Greek letters. Avoid footnote management systems and end-of-line hyphenation.

d) Preferred word processing software packages are: Microsoft Word for Windows, Microsoft Word for Macintosh, and WordPerfect, preferably saved in Word format. LaTeX files cannot be processed. The text should be saved in the standard document format (doc or docx).

8. Proofs and Corrections

Authors will be sent a proof of their article by e-mail in the form of a pdf file. A corrected proof should be returned to the Technical Editor within the indicated deadline.

Corrections of errors other than those due to the printers or editors will be charged. Standard correction marks should be used.

Together with the proof, the authors will receive a form to order reprints or full issues. The completed form (even if no reprints are required) should be returned with the proof.

9. Open Access

Authors may post their own published articles in the internet under the following conditions:

- Posting is allowed on the author's personal website and/or in non-profit and non-commercial repositories of the author's institution and/or funding body.
- Immediate release to open access is available upon payment of the full production costs of the article. Otherwise public availability of posted articles must be delayed until 12 months after print publication in the journal.
- Copyright and source must be acknowledged the following way: 'Copyright ©Swiss Chemical Society: CHIMIA, volume, page, and year, doi'.
- The publisher's version of pdf must be used. The pdf documents are available at ingentaconnect.com – free of charge for members of the Swiss Chemical Society.

10. Plagiarism

CHIMIA will not accept plagiarism. Authors are responsible for ensuring that any citations are clearly marked and correctly cited.
