FilSon Starts Manufacturing Basket Filter Element in its Own Factory

FilSon, a global leader in designing and manufacturing filtration equipment, today began manufacturing basket filter element, also called basket filter cartridge. It is a coarse filtration accessory, designed for a range of flow rates (up to 3600m³/hr.), and a filtration rating of 5µm to 2000µm. FilSon basket filter element is specifically designed to capture large solids or contaminants from the pipe systems. It therefore improves efficiency and reduces maintenance cost of components downstream such as pumps, valves or return flow systems.

“Designing FilSon basket filter element creates a unique filtration experience that you can adapt to your unique contamination levels in the piping systems,” said Mrs. Kunvniee Lee, FilSon Filters General Manager. “We believe our customers can now choose from many basket filter cartridge sizes and shapes, designed for a range of filtration ratings, flow rates and pressures.”

Among the main features of FilSon basket filter elements include:

**Design and material:** FilSon basket filter elements are made from stainless steel perforated sheet, woven wire mesh, sintered wire mesh and wedge wire screen by welding process. It is therefore a perfect filtration accessory in many applications such as food, beverage, power plants, water treatment, petrochemicals, oil & gas industries, amongst others.

For dynamic filtration needs in the piping systems, FilSon basket filter elements come in different shapes and designs, including flat or inclined options, depending on the customer requirements. Also, other options such as hopper bottom, flat bottom or customized options are available for specific filtration needs in the pipe systems.

**High compressive and mechanical strength:** FilSon basket filters are cleanable and reusable, besides being easy to backwash. They have a high dirt holding capacity and guarantee a low pressure drop in the piping systems. All FilSon basket filter elements come in both standard and custom designs for OEM partnership. They are designed to fit industrial basket strainers such as duplex basket strainers and simplex basket strainers.
